

# TruOFFICE™

Secure Access Simplified

## WHY USE TRUOFFICE?

- Ensure user, corporate, and regulatory compliance
- Increase productivity for remote and mobile workers
- Simplify IT management for organizations
- Secure digital resources and protect identities
- Offer seamless business continuity and disaster-recovery
- Reduce IT infrastructure costs

**M**ore than just remote access – TruOFFICE enables increased productivity, business continuity, seamless communication and collaboration.

## OVERCOMING THE CONNECTIVITY CHALLENGE

The current work environment has never been more dynamic. Whoever you are, chances are you take your work with you on the road, home and sometimes on vacation. Despite the working environment evolving beyond the physical boundaries, your personnel are more connected than ever. And IT departments are challenged to find innovative solutions to accommodate the needs of remote workers while protecting the organization's valuable digital resources.

Whether you're a small business offering legal services, a medium-sized pharmaceutical company, a global enterprise or a government agency, mobility, simplicity and security are critical to your personnel's productivity and imperative to your success and continuity of operations.

Route1 understands that organizations need to ensure that their operations remain seamless regardless of where their personnel are or what changes are happening around the world. With higher gas prices, telework on the rise, employees travelling to meet with more global customers and more people deployed in the field, organizations are looking for ways to meet the mobility needs of their staff.

Part of this challenge is finding a solution that does not rely on user diligence in order to protect the enterprise network and its digital resources. TruOFFICE addresses this human challenge; it is simple to use and security is inherent in how the technology is used.

## DELIVERING SECURITY, MOBILITY AND SIMPLICITY

Route1's TruOFFICE™ service empowers your remote and mobile personnel to simply and securely access digital resources from anywhere at any time, as if they never left their desks. Users simply insert a Route1 MobiKEY®, an identity validation device, into any Windows-based computer with Internet access and they instantly establish a secure connection to access all of their files and digital resources. Multiple computers can be established as hosts to be accessed from any other guest computer. Unlike VPN-based connections, TruOFFICE does not transfer any files outside of corporate firewalls and does not store any data on the remote device, leaving the remote computer clean, secure and without a footprint of the work session.

TruOFFICE leverages Route1 MobiNET®, a service-delivery platform that manages the identities of users and digital resources in order to authorize and facilitate secure connections between known and unknown endpoints. MobiNET combines the strength of a Public Key Infrastructure (PKI) solution with the trust and flexibility of two-factor authentication, creating a platform that meets the stringent security mandates and policies established by governments, militaries, financial institutions, enterprises and health services. Accessed and managed with Route1's MobiKEY, MobiNET provides an end-to-end solution that allows entitled users to securely connect to digital resources in a simple, cost-effective and trusted manner.

## PLATFORMS AND REQUIREMENTS

Windows 2000/XP/Vista/Server 2003

USB 2.0 (backwards compatible with USB 1.1)
